le 503 - 2 December 1971

for November is out even if four days

week are devoted to the diacussions

The European Community is suffering I from growing pains. There is no mistaking the symptoms. Everyone who has anything to do with the current negotiations on enlarging the Common Market, either as e politician or as an administrator, is showing signs of tired-

Exlating numbers of the EEC are increasingly irritable among themselves and last but not lasst there is a general feeling of uncertainty as to how and in what direction Europe is now to develop.

Committed and imaginative advocatas of European integration may have enough ideas as to liow the crisis can be overcome but their medicine varias not only in composition but also in dosage,

This is understendable enough aince et the moment no ona can tell whether long-term treatment should be geared to the requirements of an eight or ten-member Community.

The matter of the future size of the EEC, a question that aeemed in principle long since to have been solved, recurred recently in the course of deteiled negatiations. Norway and Denmark, unlike Britain and Eire, have egain given rise to doubts es to their willingness to join.

The spirit is willing but the flesh, in this case, the fish, is weak. European fishing regulations are proving a bone of contention es fer es the Danes, end more particularly the Norwegians, are concern-

Fishermen along tha lengthy reaches of the western seaboard of Norwey stand to forfeit their livelihood if they heve to share their fishing grounds with the batter-equipped trawler fleets of Common Market countries. Their government is thue prassing for e special agreement on Norwegian waters.

Norway's ergument is that its reservas of fish ara as much en integral and vital part of the country's raw material resources as are the riches of the earth for other countries

Norwagian-mambership-of the Europeen Community will in the final analysis depend on whether this argument gains ecceptance and the Common Market agrees to some special arrangement.

The other doubtful prospect, Denmark, is also concerned to gain special conditions for the Faroes end Greenland, which also depend on fishing as the basis

COMMON MARKET

Extending membership will not solve EEC problems

fusion among its opposite numbers in of the EEC. Brussels by announcing its intention of pressing ahead, even after joining the Common Market, with Danish ideas of a welfare society and cooperation with the Nordic community — the Scandinavisn countries, that is.

The patience the EEC Cammission has shown with would-be members would indeed seem to have been overdone.

Since the inception of negotietions lest aummer the Commission and the Council of Ministers have continually had to remind all conceroed that membership does not only involve advantages; it also calls for concessions on the part of would-be members.

This realisation can hardly be said to be taken for granted yet by all of the original Six. It does not seem to have occurred to Denmerk and Norway et all.

Domeatic squabbles and difficultles with other countries have dealt sevage blows to Idealism even in Brussela, yet plans are nonetheless being forged for the future of Europe in what is, on the quiet, tha Continent's capital city.

The ten-member Common Market Is alraedy having an effect at Berlaimont, the gigantic Common Merket administretive centre in Brussels. Accommodation will have to be found for the new members from the comfortable thirteenth storey, where the Commissioners and their staff reside, right down to the cellar.

Many a civil sevant who is currently engaged in working out the details of admission for Britain, Elre, Denmark and Norway will be out of e job once the

new inembers put in an appearance. This particular problem is nothing new for the Community, though. Something similer occured in 1970 when the number of members of the Commission was raduced from fourteen to nins.

It is more difficult by far to assess the

extent to which Common Market expan-

Bonn and the Arab world

Basically Bonn must be satisfied with the Arab League'e decision to postpone a decision on reauming diplometic relations with this country (broken off by most members in 1965) for e further three months.

This of course presupposes that the Federal government in Bonn is fairly certain that the decision will then be in favour or that the Arab countries concemed will evantually act on their own

For another, more important reason Bonn must, on the quiet, have been rather relieved at not having to resume diplomatic relations with the countries that have in the meantime accorded the include Egypt, Iraq, Syria, South Yemen and Sudan).

In order to bring at least a minimum of pressure to bear on East Berlin Bonn hes advised all governments thinking in terms of recognising the GDR to ewait the outcome of intar-German negotiations before making any move.

Had ambessadors from Bonn reappeared in half a dozen capitals alreedy boasting representatives of the GDR e number of other countries might have used the fact as an alibi for recognising the GDR themseivea.

Whatever assessment is made of this so-called School Doctrine it can confidently be assumed that it was of no

consequence for the Arsba, and more particularly tha Syrians, who insisted on

The Arabs have their own interests in mind and whet they want is to drive e wedge as far as possible between Bonn and Israel in order further to isolate their "arch-enemy" in world affairs.

In view of the fact that it is they who broke off relations with Bonn they have baen ramarkably successful. The Federal government not only lent support to the November 1967 UN Security Council resolution (though the importance of this support is qualified by the fact that the two aldea interpret the resolution difwork of the conference of Common Market Foreign Ministers, seconded France's view that israel ought to withdraw to the pre-1967 frontiers.

In a letter to President Sadat of Egypt Chancellor Brandt has steted that he is opposed as a mattar of principle to territorial gains by military force. In the circumatancee this is e one-sided pro-Arab

"Unless this impression is to be retained Bonn must also atress its view that disputes must be resolved by means of lirect repotiations between the parties concerned (this, of course, being an

Israeli argument).

Copenhagen has also caused con- sion will adversely affect the Institutions

As they stand at the moment the situetion can only improve, even though an increase in membership is almost bound to bring with it an increase in the number of disagreements.

At all events an enelysis of the current tenor of feeling at all levels of the EEC tells a sed story. No change can fail to be a change for the better.

The European Parlisment leads a shadowy existence end has to fight for each and every minute prospect of bringing influence to beer on the Commission. The Commission itself does not consist

expatriates, as Generel de Gaulle scomfully called them. It has developed a European consciousness, works hard and produces eny number of proposals most of which, however, spend years in the Council of Ministers' pipeline.

This is not to say that the Council of Ministers is inactive but members often iack the initiative to convert drafts into legislation and so further the cause of European integration.

The enlarged Community ought to overcome these institutional hendiaups, Above all it must make the organs of the EEC function better, that is to say either increase their powers of decision or allow then to make better use of existing

This calls for a demonstration of politicel intent on the part of all membercountries. The following short-term goals are a possibility;

The European Parliament could be elected by e direct vote. This suggestion was made by the Community in 1965, Despita the difficulties involved (initial disinterest on the part of the alectorale, expense and the large size of constitucncles) direct suffrage would boost the agitimetion of European parliamenterans end increese the political weight of their proposals,

Directly elected, the common parliement of a community of perliamentary damocracles would stand a chance of becoming the motive force end moderator of a united Europe.

- The Commission has sufficient powers. it is, for instance, the sole EEC body empowered to initiate legislation. It supervises the observance of Common Merket legislation and cen, if the need arisea, appeal to the European Supreme

In any reerrangement of the Europeen institutions it would, then, be less a matter of allowing the Commission greater leeway than one of ensuring that it retains its present status, which is con-

tinuelly called into question. - The Council of Ministers has on more than one occasion bean the etumblingblock in thie connection. This has been increasingly possible since the 1966 Luxembourg conference at which, as a result of pressura brought to beer by General da Gaulle, the Council of Ministers unenimous decisions were taken and majority votes avoided.

Let the principle of unanimity be ratained but ensure that the Council of Ministers come to e decision on the Commission's proposals within a certain neriod of time instead of shelving them for what in the past have bean three, four or evan five years.

Major European goals must be outlined at a higher level, though, and this will be the task facing next year's summit con-

The European Community is elready more than a mere association of economic and trading partners with common (Der Tegesspiegel, 16 November 1971) Interests. A ten-member Common Market must transcend the economic framework to an even greeter extent.

The economic power of s Commun. That was the unanimous vergier or with a grester volume of trade than the Secretaries Egon Bahr from Bonn United States and a higher gross nation Michael Kohl from Eest Berlin product than the Soviet Unian will be lowing their four-day talks in East exercise political influence, both at he laim.

and abroad.

The current crisis of the West of ill in the outlines of the Four-Power monetary system has made it abunds becament on Berlin have entered a new clear that the world, not in measure the sist of Soviet Communist public opinion in member-count by lesder Leonid Brezhnev to East would like to know what it can expect the recently. But they have not yet the European Common Market.

In order to clarify matters the instance is the crucial finishing straight.

In order to clarify matters the instance by both sides show summit conference must work eutge flious optimism. Egon Bahr has said lines on three major points:

It is not enough to aim at an economic than the had in the had in the count in the deadline is to be anywhere it addition to this he had "more mat short end medium-term descriptions is addition to this he had "more mat short end medium-term descriptions is addition to this he had "more mat short end medium-term descriptions is addition to this he had "more mat short end medium-term descriptions is addition to this he had "more mat short end medium-term descriptions is addition to this he had "more mat short end medium-term descriptions is addition to this he had "more mat short end medium-term descriptions is addition to this he had "more mat short end medium-term descriptions is addition to this he had "more mat short end medium-term descriptions is addition to this he had "more mat short end medium-term descriptions is addition to this he had "more mat short end medium-term descriptions is addition to this he had "more mat short end medium-term descriptions is addition to this he had "more mat short end medium-term descriptions" is addition to this he had "more mat short end medium-term descriptions" is addition to this he had "more mat short end medium-term descriptions is addition to this he had "more mat short end medium-term descriptions".

The Community's attitude tawadus riched the ericial finishings traight.

The Community's attitude tawards and hearing the other boring his end outside world must be reviewed a the tunnel.

■ INTER GERMAN RELATIONS

GDR/FRG talks breakthrough is still a long way off

have dared to predict such a speedy or West Germany. conclusion of negotiations.

The obvious progress that has been made in recent days should not be allowed to cooceal the fact that there are still difficulties to be overcome. At the moment many Barlin politiciens, including members of the SPD, are growing more and more sceptical the aster the talks progress.

There are still many bones of contention requiring hard bergalning with the maximum of expertise. For example, the GDR is insisting that people travelling to and from West Berlin must heve a vise. In their view any other solution would just mean creeting a corridor and their Foreign Minster, Herr Winzer, rejected this outright in e television speech in mid-October.

This attitude runs contrary to that expressed in West Berlin in particular that the GDR has no longer any right to prevent anyone using the access routes to West Berlin, following the Four-Power agreement. This would prevent the vise stipulation, e visa being nothing more than e form of permission to use the transit roads.

Thera is not even much hope of a compromise, for instance in the form of a "season-ticket" visa, The GDR points out that there is a National Democratic Party in the Federal Republic end it would not like members of this right-wing group using Its highweys.

One perticularly hotly contested point concerns the seels on lorries, which, according to the Four-Power agreement should be placed on the vehicles "before

matter of e few weeks ago no one would departure", that is to say in West Berlin

The GDR does not consider this to be e sufficient guarantee against escapa attempts by would-be refugees. For this reason they would like to add their own seals to the Western seals. This is also uneccepteble for the Western powers, aithough even they have little idea what form the seals should take.

If the sealing process were to be carried out according to the requirements of international customs laws for internetionel goods traffic the whole procedure would be complicated in that it would take aven longer than the present holdups while the East German authorities check

in addition to this only about thirty per cent of lorries in West Barlin conform to the regulrements of international cuatoms-sealed traffic.

As far as traffic between the Federal Republic and West Berlin is concerned the only matter that should interest the GDR is the possible aiding of refugees or the distribution of propaganda This means that the sealing process could be quite easily estried out by the police or adway officiels.

The Berlin customs authorities would be delighted if this business were no longer their pigeon! But haulage companies themselves are not at ell happy about the idae of sealing. They fear long walting periods and they are not amused by the dee of even empty lornes having to be

Berlin traffic is In fact subsidised for empty runs and when the sealing process is carried out it would be quite obvious

whether e lorry were really empty or if it had loaded a crate or two on board.

Despite ona or two basic diffsrences of opinion between Bahr and Kohl the discussions ere managing to get over the technical problems. There is subject matter enough for long talks — ali-in fees (for the use of highways, for tax adjustments and possibly also for the issuing of vises), simplification of dispetch procedures end prevention of abuse, legal protection, breakdown services, accident aid services and Improvements to rail end bus connections as well as simplification of the checking of papers for long-distance lorry and Inland waterway traffic.

The other Berlin negotietors Müller and Kohrt have a somewhet simpler time of it - though on the other hand their job may be considered even more difficult alnce they stumble more quickly on controversiel queetions.

The German Democratic Republic is as keen as ever on rationing the number of visita West Berliners will be permitted to make to East Berlin and the GDR. The conditions they would like to impose ere somewhat more favourable, but still unaccepteble for the Berlin Senete. For Its part West Berlin is prepared to accept a degree of retioning for e claarly defined and agreed trensitional period, in order to stem the flood of requests that is likely to come at the outset,

After this transitional period West Berliners - like West Germans and foreigners - would be allowed to traval to Esst Berlin as often as they wished.

Nor has eny unity yet been reached on the exchange of territories. Even the most obvious case, a corridor to the West Berlin exclave of Steinetlicken, is being complicated by the junior members of the East Berlin negatiating team.

This all goes to show that the tunnel Bahr end Kohl, Müller and Kohrt have started digging from East and Weet is still months eway from the triumphant moment when the breakthrough is made,

Joaquim Nawrocki (Die Zelt, 19 November 1971)

There are signs of nervousness in the Opposition. Obviously the CDU/CSU Ostpolitik has put now fear that Chancellor Brandt's Ostpolitik is more popular than they had

assumed to date. If the continued increase in prices in this country end the decline in the number of jobs do not make them change their calculatione it seeme likely that thay ere preparing to march into the Badan-Wirttemberg provincial essembly election bettle next April cerrying the entl-Ostpolitik banner.

But public opinion poils must have teught them that people in this country with right-wing views do not necessarily go along with a strict rejection of the treaties with Moscow end Warsaw all the

With these factors in mind the CDU is plagued, especially down in the south-The German Crimiles Agood deal more political putty

Publisher: Friedrich Reinecke, Editor Branch and September Special and Septembe west of this country, with the problem of treatles on to a side track, would fail.

At the moment there is still a grand coalition of CDU and SPD in Stuttgart, with the CDU calling most of the tunes, The Christlan Democrat prime Minister Hans Filbinger was until quite recently almost decided that Baden-Wirttemberg's five votes in the Bundesrat should be placed in the anti-Ostpolitik scale-plen.

If this should come to e parliamentary treatment of the treaties it would almost certainly mean the break up of the grand coalition by the Social Democrats.

right-wing parties in a cleft stick

attitudes to the Otspolitik. There are three weys in which they could react, and all of them have their advantages and disadvanteges.

The first involves the CDU/CSU's say-Ing a strict No to the Moscow and Warsaw Treatiee. Then the voter would know exactly where he stood and the party's consciance would not be plagued, since it knows that most of its members and supporters consider the treetles in their present form unacceptable, oot only from a tacticel point of view but also from a moral conviction from the depths of their

Their fears arise from the Soviet hagemonial claims erising from the Moscow Treety and the possible withdrawal of the Aftericans from Europe

The second roed thay could take is based precisely on these fears. If, as many as well and the Opposition's plans to at Christien Democrats feer, the treaties least gain a little time by shunting the with the East will hasten the withdrawal question of ratification of the East Bloc of the Americans and make West Germeny "softar" the only government that could halt these davelopments would be one led by the CDU/CSU.

Since there is no guerantee that the SPD/FDP government will fail to push through the retification of the treaties despite their slim and endengered majority in the Bundestag, because there is no calculating what the consequences for German-Soviet relations would be if these treaties collapsed now and a rigorous battle against the Ostpolitik might endanger the CDU/CSU'a chances of success In a situation such as this the CDU in the 1973 general elections thera ere cannot be blamed for thinking over their politiciane in the right-wing parties who

are calling for en end to be put to this

fight to the death. They ere calling for Baden Württemberg to ebstain in the Bundesrat vote and for the Opposition in the Bundestag to cease impeding the Ostpolitik end the ratification of the treaties, even if they feel they

have an opportunity to do so. The third opportunity is e compromise to e certein extent, coming midwey between the other two ways it is based on the essumption that a totel rejection of the treaties with Moscow end Warsaw would indeed reduce the chances of the CDU et the next general election and lead to a renawed outbreak of the Cold War with the Soviet Union, perhaps of a more vehement kind than in the fifties.

If this were the case the CDU/CSU could happily go alreed with all attempts to oppose ratification in the Bundestag For then the government coalition would only need e simple majority and not a majority of the members of the Bundes-

The limited majority amounts to 249 votes and the SPD/FDP have only 251 at their disposal. It would only take three and the East Bloc treaties would fail to pass the Bundestey. This danger would be averted If the Bundesrat were not to raise any objections.

At the moment it is not clear in which direction the Opposition will jump. If the fears of many leading conservetives are taken seriously it seems likely that the treaties will speed up the withdrawal of the American forces and the aoftening up of the Federal Republic and if one takes the line that rejection of the treaties will freeze up West German-Soviet relationa completely the advantages of the second possible CDU line with regard to the

Ostpolitik ere obvious. Ulrich Frank-Planitz | ... (Deutsche Zeitung 19 November 1971)

PROFILE

Walter Hallstein, one of Europe's first Europeans

Even Walter Hallstein, seventy years old on 17 November and tha man whose name will remain linked with the struggle for European unity, does not know whether Europe will ever be united and its power converted into political

The struggle continues. It did not end for Hallstein when he left the presidency of the European Commission in July 1967, a post he had held since I January

As Christian Democrat member for the Neuwied/Altenkirchen constituency and as president of the European Movement, he liss retained a platform on which ha esn continue to work and for whose existence he might have to fight.

It is hard to avoid the word 'austere' when speeking of both Hallstein and his work. Almost everything about this by ao means physically robust man is austere, though this does not rule out his natural charm, chearfulness and freshness when among his colleagues.

Those around him nonnally see how he relentlessly pursues the consequences of his thoughts and actions. But evan today he is just as austere, nay accetie where his own person is concerned.

Rarely does ha ellow his temper to get the better of him. It is only when he feels himself provoked that he gives vent to his feelings. One example was during a dramatic debate in the European Parliament after de Gaulle had unleashed the great crisis. "Not like thot, not like that," Hallstein yelled at M. de Lipkowski, now a Stete Secratory in the Quai d'Orsay,

The political public and the acodemic world that has often honoured him have never got to know him as anything but a cool thinker and pitliless snalyst incopable of speaking apart from in eotogories. His speeches often became lectures.

But nothing would be more foolish than to underrate his capacity for tuming political opportunities into politicul facts and to include him in the list of theoreticians and political scientists that German history has always known.

Hallstein never hides the fact that he is a lawyer and believes in the new, more civilised forms of politics and especially in the rola that the law as well as the modarn State has to play. He does not believe in political and legal tricks, demagogy or short-term tectics.

He set his sights on European unity as his stretegic aim after the end of the storm and stress era in West German foreign policy, after the regaining of sovereignty and the re-establishment of the Foreign Office where ha worked as State Secretary until 1958.

It was Wilhelm Röpke who recommended Konrad Adeneuer to summon Hallstein from his work at Frankfurt University. The appointment of Hellstein, like Theodor Heuss, Ehlera, Vocke, Schäffer and Ludwig Erhard to mention only a few names, was one of the greatest atrokes of luck in postwar persoonel

Hallstein was bom in Mainz, attended high school and studied for five years in Berlin where ha specialised in international civil law. In 1930, when 29, he was oppointed a professor in Rostock and transferred to Frankfurt in 1941, becoming vice-chancellor of the university there in 1947.

the relations of third parties with the German Democratic Republic bore his into the foremost renka of parliamenname did not worry him a bit, even after tarians, It had become unfashionable.

so far survived all erises unharmed and. surprisingly, lost none of its attractiveness for the outside world.

The Common Market has now becau foreed into a role that Halistein always wanted to prepare it for, a role for which it is however not prepared. What would have become of the EEC if it had been entrusted to a pragmatician or realist from the very beginning?

Hallstein was never an easy man to work with, aspecially when he was the chief. But he never demanded anything that he would not have been prepared to

There was never any shortaga of criticism concerning his style. He was blamed for the great Common Market crisis resulting from the French withdrawal from a meeting of the European Council on 30 June 1965.

It was said that he had needicssly provoked General de Gaulle and committed tactical errors but such acensations do not stand up to closer exam-

As odd as it may sound, Hallstein can be compared to the General. De Gaulle viewed Hallstein as a worthy opponent. Anyone who has studied the French foreign policy leading up to 1965 knows that nobody could have got round the 1965/1966 crisis. The clash was inevit-

When naked at the end of his term of office whather he had made any mistakes, remained tha focal point of all policies Hallstein replied that he had been misaiming for European unily and that it has taken about only one thing - he would

never have thought it possible for member country to have walked out of session of the Council of Ministers.

This evaluation of the obligations in dertaken by the members of the m community and the breach of the obligations by France show the different between Hallstein's and de Gaulle's Me of power and politics.

monisation of policies is, in his vew, and practicality. A lot of what General is a constant of the police no longer want to be the Gaulle, his helpers and fellow-traveled the police no longer want to be the destroyed is probably irreparable but the ruling classes but training and manin tosk is still there. As Halled the traditional concept of a policeman's recently said, "It is now a matter of the position.

This shows how dramatic at a position. and deeth." This shows how drams it is position.

Six months

work, management, computers and criminoiogical research.

Proposals of this type should be a matter of course but to many of the officials organised in trade unions they sound like something from Utopia, Year in, year out, these nich have tried in vain persuade their superiors to implement proposals for adapting police work to the

The pollee force of 1971 still presents a patchwork pieture. The Federal states' responsibility for police affairs leads to the inequality of opportunity for both police officials and criminals.

Various pay retes are in force, training differs from region to region and the terminology for one and the same thing varies. There are also varying uniforms, weapons and vehicles. The only common denominator is the para-military language born of tradiiton, where tenns such as lasting resistance, attack and area of fire

The OTV is demanding a radical reform of police organisation. Like Munich's police psychologist Georg Sieber, the trade union esks whether the police ere being used for the right jobs and whether praetical work makes allowances for the long periods of training.

Pulice today are responsible for accused persona, removing dead bodies, testing the safety regulations of agricultural concerns and bringing truants before. education authorities as well as dealing with traffic offences and criminal aetivities. There is no time for prevantive wark. One official stated, "As we are the only State institution working around the clock, we are turned into a Jack of all

But the staff shortage ealls for rationali-sation measures. The OTV would like to see police activity restricted to four main fields - the fight against crime, accident prevention and traffic duties, wording off dangers to public safety and providing protection during demonstrations.

This programme should cause some easing of the situation. At present sixty per cent of a policeman's work is taken up by incidental work that has nothing to do with the police force's legelly defined

role of protecting the public. Police officials state that even in recording minor aecidents they are only acting as aida to the insurance companies.

Georg Sieber says, "The current legal situation is no longer adequately covered by the old Prussian law. The legislature will have to approve new measures so that the police do not remain the whores of internal administration."

The ali-round image is proving an obstacle. Most of the work today is no longer completed. That is why the OTV demands a law related to police abilities and one that does not demand hypocrisy.

Public prosecutor Jung of Stuttgart stated that the current situation was not legally justifiable. Frankfurt's deputy police chief Gerling said that exceptional rulings represent a dangerous aicment. But sociologist Albreelit Goeschel of Munich stated that it was a proven fact that the police, intentionally or unintentionally, were always selective in their

But how is the function of the police force to be eased in law. The principle of opportunity has no chance in the Bundestag. Laws cannot be changed just because of a shortage of staff and the resulting

But society will have to accustom itself to the fact that a different value will be attached to some offences in future, that the police will no longer take an absolute view of legal standpoints and that smnmonses will disappear immediately into

State Secretary Stakemeier of the North Rhine-Westphalia Ministry of the Interior stated that OTV demands for a re-assignment of work according to centres of gravity were Utopian, Rationalisation measures were already in prepara-

tion in North Rhiac-Westpholia and Ber lin. he said.

Certain summonses were sent direct to public prosecutors without any accompanying message concening the decision to continue inquiries. Time would tell whether this procedure would prove itself in practice.

The internal organisation of police authorities poses as many problems as the police force's relationship with the world outside, as the congress once again show-

Police officials have noticed a growing tendency to think of the municipal police and the eroninal police as two different

Police official Kowallek of Gelscukirehen asks whether the two types of police should be separated, adding that 85 per cent of eases are solved by the municipal forces. A joint form of organisation would enable better results to be obtained, he added. The OTV states that the two groups should be placed under one

Criminals have a good chance of evading orrest because of the shortcomings of ater regional cooperation and divisions

Apart from Nuremberg there is no place in the Federal Republic conducting eriminological reseurch or a survey showng whot police will be expected to do in years to come. No research department has been attached to the new leadership centre at Hiltrup. Tha congress showed that the police are

practically powerless in the present sitriation. Work is increasing year by year, the staff is inadequate and officials are chasing after the events. There is little opportunity for preventive work.

Demends for a revolutionary reorganisation pale in view of the slowly moving mills of ministerial bureauerocy.

The police will now take o look at thair own position. Saarbrücken University is to draw up a new image of the police force adapted to modern society, whatever that may be.

Carl-Friedrich Theill (Frankfurier Rundschau, 13 November 1971)

President Heinemann calls for the human touch from civil servants

Dresident Gustav Heinemann has called on civil servants to help introduce more of the human touch into odministrotion.

Speaking in Bonn at the Civil Servants Congress organised by the Trade Union Confederation, President Heinemann stated that the historical role of the public official as o tool of the ruling classes had changed. The loyalty to be shown to ell citizens remeined however.

This meant that the odministration could no longer ect es authority had in by-gone days but should instead be seen as a service for all citizens. . Heinemann edvocated that the produc-

tion principle should be edhered to in public administration and olso demanded a thorough re-examination of the pre-

Speeking at the same congress, Minister of the Interior Hans-Dietrich Genscher referred to recent events and stressed that there was no room for political extremists in the public services. This applied to both left-wing and

right-wing extremists, the Minister stated. adding that the government would not permit the public services to become a parsde ground for those extremists who. more concerned about the letter of the had foresworn illegal political action and had now embarked on a "March through should be given a more human touch, he the Institutions". Genscher stressed that the first thing asked of a public official was his loyelty to the constitution.

StrogenistieZenung

In his speech to civil servonts organised

within the Trade Union Confederation

President Heinemann hod spoken above. all on the still rather gloomy view of administration held by the public. The President stated that the reputation of eny public authority depended most of all on what it performed for the

genaral public. How can a crtizen trust ony public body adopting a position of command or cauching its decisions in o frightful officialese that is more likely to put him off rather than haip him?

public services. He felt performance was more important in questions of promotion then the old quastlon as to whose turn it was. It was often said moliciously. thet public officials are unable to save themselves from two things - retirement and promotion.

President Heinemann stated that he received a number of letters every day complaining that the authorities were law then its spirit. Public administration said. Everyone was agreed that this should not remain a catchphrase.

(Süddeutsche Zellung, 12 November 1971)

Ernst Benda leaves the political stage to head constitutional court

et's get oway from here first," was Ernst Benda's first comment on being congratulated by the Bundesrat after his election to head the Constitutional Court.

reputation should be reminded that, look-

the European Economic Community has

His words may hove seamed un-important or off the cuff but people who know the 46-year-old former Minister of the Interior a little better will realise that they were typical of the men.

His comment, delivered with an embarrassed smile, does not only show the charmingly unconventional way in which Benda has always got round protocol, even as a member of the government.

It also diustrates his near-awkwardness on official occasions when he has been at the centre of activities.

His wish to "get away from here" also showed his disguat at the undignified end doubtlessly harmful perty wranglings over the appointment of six judges at the Constitutional Court in Kerlsruhe.

There will be few people in Bonn who have been embarressed there wranglings as much as Ernst Benda. This is due less to his position in the centra of these discussions as to the convictions and principles he believes should be retained however violent political clashes may becoma.

Ernst Benda's falthfulness to principles has marked his career. It began with a speech to the Bundestag in 1965 when he opposed the majority of his party and called for an extension of the period The fact that the Hallstein Doctrine on for the prosecution of Nazi criminals. It allowed under the statute of limitations

despised them. If the meeting with the New Miles Devis Group was one of the highspots of the Feetival this was less to do with Davis himself than with the mualcians whom he was inspiring or at least saxophonist Gary Bartz and planist Kelth Jarrett, both of

Minton's Playhouse All Stars stepped into the spotlight as a group set up by Berendt and Wein In an attempt to reconstruct in Berlin the team that created Bebop and hence Modern Jazz in the Harlem of the forties. The attempt was a success, although ane of the most important musicians from the old band, Charlie Parker, was sadly absent.

Dizzy Gillespie'e proud trumpet colorature end tha bizarre background of Thelonius Monk's formenting piano made this performance a real occasion.

Another occasion was the performance of the Berlin Dream Band under Gil Evans. This will probably not receive all the praise it deserves because it clashed with the Now Music Night for which most of the critics deserted it. They missed an encounter with a gentue, for Evans is just that — undoubtedly he is the creator of the specific Milee Davis sound.

Berlin offered hlm his first-ever opportunity of composing for an orchestra of his own selection. He doubled up tha saxopirones with flutes and clarinets end augmented the brass section with three horns, bassoone and oboes.

The music he produced with the basically rather conservative selup muet ba among the strangest that has ever been heard at a concert. Powerful chords stamped out by the horns seemed to float away inio a secret realm, banal hite were modified with strangely iridescent har-monies awoken from their own banality into a phantasmagoric world with e touch of Kurt Weill's "Barbara" song, combined with his own expansions and contractions like a tonal collage from n burdensoma

What Evans had to offer was music from hallucinatory and visionery realms, music from Utopia transcending all known categories.

If the recording companies had their wits about tham they would waste no time in signing up this man and giving him the orcheatm of his choice. For this is something new - this is the future and posaibly not only the future of jazz.

Hellmut Kotschenreuther (Kleter Nachrichten, 9 November 1971)

Mary Wigman, the mother of German Dance, celebrates her 85th birthday

Expressive dance is inconceiveble withmothar of it as Enist von Laben was ita faiher. 13 November this year marks the great dancer'e 85th birthdey.

to be an idol of the young at home in

Japan and his quartet is one of the

leading jezz combos there. Listening to

his breathtaking virtuoso playing we see

constant signs of his preceptor Miles

Davis - in fect at times he sounds more

dance then a jazz festival!

For some time now Mary Wigman has been living in West Berlin. Sha could be considered the pioneer of e naw feeling for life and, inspired by von Laban and Isadora Duncan she developed a new siyle which harks back to examples from antiquity and which breaks free from arty-crafty forms.

She did not dance in ballet shoes and a tulle dress, but barefoot and in plain dressee. In place of the pirouettas and other de rigueur ballet movements, all delicate and deinty, she showed elementary human experience in her danc-

Thus she overcame the atrictures of so-called Classical ballet, although this has in the meantime gained ground again, Expressiva dance time and again justifies its exisienca, especially in America, where "German Dance" - the name given to it in Anglo-Saxon countries - has more enthusiastic followers than in Germany itself.

clearly seen in modern American balleta, She was born Marie Wiegmann in Hanover in 1886, the daughter of a businessman. After early schooling in Hanover she went to convent schools in Britain and French Switzerland. Sha took dancing lessons with Jacques Dalcroze in

Dresden-Hellerau, where she set up her own dancing school in 1920.

Her Seven Dances of Life gave rise to lively discussions - they represented Passion, Love, Lust, Pain, Daemon, Death and Lifa. And coniroversy surrounded other creetions, such as Triangle, Vision,

Complaint, Dance Fairytale and Raum

In most of these dances slie showed an expressiveness that was astringent and violent and repelled many people, but at

times this gave way to capricious gaiaty.
What was unusual in the extrema waa the way the music to this dancing did without harmony; in fact much of the time the very expression "music" is in doubt. For this music's main quality was a sharply defined rhythm. Thus the art of dancing showed that it could be independent of melodies. It pronounced its independence even though this emancipation was later renounced.

Nevertheless dancing lead to break free from the bounds of what hed been possible. And Mary Wigman helped dancit that with a consistency and logic that might have been expected from a man rather than a woman.

She had e great artistle aense, which could be seen from her 1946 Leipzig production of Orphens and Eurydice - It was at this time that she was made e profassor - and her later Mannheim production of Handel's Saul and Carl Orff's Catulli Carmina.

In 1949 In the Dahlem auburb of Berlin sha startad a dancing aeminar along with Marienne Vogalsang. Sha gave many radio lectures and among har pupils the most outstanding are Kreutzberg, Palucca, Yvonna Georgi and Dore Hoyer.

EDUCATION

Husbands, wives and children attend trial education course

There you are at work and are called into the boss's office and asked whether you would like to go on holiday with the wife and kids for a couple weeks. You can have special leave, the firm continuca to pay your wages and Bonn meets other expenses. Bonn? To be more accurate, the Central Bureau for Political Education is inviting you to a congress. But why? "

Many of the people attending the "Family and Society Today" congress must have been thinking along thesa lines

But what was the reason? The Central Bureau for Political Eudeation was conducting an experiment to find out how. paid leave for further training should be organised and what courses should be taught.

Twenty-four working-class families with an average of three children aged between three and fourteen were invited to the two-week experimental course at the Dorfweil Family Holiday Centre in the picturesque Tauniis.

Tha firms employing them continued paying their wages for the fortnight'a course and the Central Bureau for Political Education in Bonn paid accommoda-

The purpose of the congress was to give both working women and housewives the chance of further political training. A family-type congress was therefore neces-sary as many of the parents would have teen unable to find neighbours willing to

is an essential with its authority,

scope and influence.

Frankfurter Allgemeine

Parents and children attended both joint and separate courses.

The Central Bureau had four main aims in mind when organising the xperiment. It wanted to gain some idea of how paid lesve for training purposes should be organised. It wanted to appeal to a specific group - working-class families and interest them in education.

it planned to stir to action the people attending the congress as much as possible during the two weeks they were there and it aimed to test educational methods and gain further information useful for political education,

The methods used were based on the aim of the coursea. Stimulating people and not just feeding them with information was the first consideration.

That is why no firm programme was fixed by the organisers before the start of the congress. Instead this was worked out together by the organisers and the people

Groups of ten to twelve persons were formed to discuss problems and set the main points of interest which were dealt with by new groups during the rest of the two weeks.

The problam groups thus developed

into interest groups. The role of adviser in these interest groups was taken up by this organising team of married couples with educational qualifications. Experts were only invited along to deal with special problems, and then always at short

Interest was always lively as the programma was exactly what the people wanted. The whole group sat to discuss special subjects such as conscientious objectors or Ostpolitik. The pluralistic composition of the organising team ensured free formstion of opinions.

The people attending the congress were activated mainly in the groups. Short talks, nawspaper articles and films provided the information necessary for dis-

A special daily paper called *Dorfivell* was printed by the institute of Communicat lons Planning, written by an editorial staff recruited from the people at the holiday centre.

The paper ensured a continual exchange of opinions and provided further information. Eight Issues came out in all and the interest grew with each number.

Teachers took care of the 72 children while their parents were attendung discussions. The older children were given lessons and did their ordinary school-work while the younger ones attended kindergarten. A special lessure-time pro-gramme with plenty of sport, rambling and conviviality ensured the necessary

At the end of the congress educa-

tionalists and journalists met to disease whether the scheme had been a success They auswered with a resounding Yes.

The organisers were astonished at the great interest shown in further training and the thirst for information comment all people attending the congress.

The natural barriers of speaking writing were overcome in s very time. Because of the methods discussions never flagged and the com proceeded without any embans

There is a future for this type scheme in political and general ed.
When the Federal Republic's education centres ara expanded consideration lieve to be made for accommodating in lies, setting up kindergartens and proing sports facilities.

First integrated university is opened in Kassel

assel University, the first integrated assel University, the most integrated comprehensive university in the Federal for the cral Republic and a prototype for the future development of all universities in the Fodoral state of Hesse, has now opened its doors to students.

The first section of the new university was handed ovar by the builders on 25 Octobar after being constructed in the record time of saven and a half months. The prefabricated building cost thirteen million Marks. Another 5.8 million Marks were needed for furniture and equipment.

This building will form the main cantre of Kassel University. The seventy thousand or so square feet of spaca available. in it house an auditorium with 170 seats, a library seating 100 students, 120 rooms for both taaching and administration, a television studio, a language laboratory and a cafeteria for 320.

Five hundred students have registered so far for tha teacher training courses. An increase of capacity is planned to reduce the strain on the teacher training departments of Giassen University.

The second stage of building work is to begin this year. The short-term aim is to elso hoped to start courses in mathematics and scienoa as soon as possible.

But the new buildings are not the only part of the integrated university. All institutes of further education in and around Kaasel have been included in the schema .

These include the State Academy of Creative Art, two engineering schools and a school of economics in Kassel along with the agricultural schools in Witzen-

At least five years will be needed achieve the complete integration of a existing ton educational establishment with their 2,500 students.

The Integrated university in Kaintands to follow a new course scientific training in teaching set search. Work is centred on drawing proposals for a reform of stades curricula.

The range of research will be extended to public of Germany. so that all sections of the integrated university can satisfy the changes in demand resulting from the further of velopment of research. velopment of research.

Reform plana for study, teaching, search and administration will be drawn up so that the integrated university control its development on the basis of it own experience.

ompliment

Among its educational aims is ship ed system of courses in the field furthar education based on scientific foundations and thus providing equal of opportunity for would-be students.

The aim of a course will depend what profession the student intends take up. The differing aims must be fitted into an integrated aystam of studes.

It should be easy to switch for one course to another or from one of the constituent parts of the university another. Students will than be able to develop their talents in the best formula. Requiem for the Bretton Woods monetary system - died aged 27

THE GERMAN TRIBUNE

The facts ore Indiaputable: the Bretton Woods currency system with its rigid exchange ratas for the currencies of the various countries of the West and its fixing of the value of the dollar to the price of gold has been broken into piecea.

The basis of this system was created towards the end of the Second World War in 1944, whan America was the sole supplier of industrial goods, raw materials

Impoverished Europe end the beaten and bettered Germans and Japanese recelved loans totalling thousands of millions of dollars from the United Statas in order to keep them alive end allow them to build up their industries again.

Nothing in the world was more natural than for the United States to want these loans to be repaid one day, and what is more, et the same value as they held when they were paid out.

This explains why firm parities were fixed in the Bretton Woods system in 1944. The Federal Republic joined in this system at War's end. At this time the doller was the only currency in the world with which It was possible to buy whatever one wanted, for the United Stetes was the only country involved in

the Wer that came through it unscribed. Apert from the dollar the only other meens of payment for which enything was obtainable was gold, since the U.S. agreed that under the Bretton Woods system it would at any time axchange

gold for dollars.

But the gold deposits of the Western

Stabilisation takes priority

Professor Karl Schiller the Minister for L. Economic Affairs and Finance in Bonn hes backed up the government's economic line in which the re-establishment of stebility remains one of tho main prioritles.

In the October report on the economic situation published by the Ministery it is stated that the government is keeping e close watch on developmenta that ere tending to cool down economic activity, perticularly those fectors arising from the internetional currency situation.

The government is concerned, we hear. to prevent measures designed to normelise the economic situation from slithering into excessive unemployment. Ecomomics experts state in the report that eccount must be teken of the increased overall risks that are being run.

The Economic Affairs Ministry sums up the present economic position thus: "The process of economic normalisation has taken further strides forward of late. ment controls on the economy. But with One decisive factor is that in July end August in-coming orders for industrial concerns, and companies manufecturing capital investment goods in particular were noticeably down.

The production lines reacted to declining orders with a slight slowing-up. September saw another relaxation in the demand for lobour. As far as wages end solarles ore concerned the required adjustment to the new economic situation is still only making itself felt very slowly.

As far as prices are concerned there is still cause for alarm although there ere signs of e levelling-out, albelt it limited, for instance in the cost prices of industrial produce."

world were, during the War, elmost entirely transferred to the United States for safaty'a sake. For this reason all the other countries of the West, being so short of materials end of dollars had to control the latter through their govarn-

This took the form of import and export control licences and currency exchange controls and the introduction of a fixed exchange price for the dollar.

If there had been a free rate of exchange at this time the price of the American goods that could have been bought, such as food, and rsw materisis for the manufacture of everyday needs, would have been so high thet large sections of the community in Europe and Japan would have been unable to pay for even the basic essentials.

However, the fifties and sixtles sew e massive rebuilding programme of in-dustries in Europe and Japan so that these countries not only maneged to supply all thek own requirements but olso menaged to export large quantities of goods ell ever the world, earning themselves more and more dollers.

Just like John Citizen's savings account et the local benk where a little deposit frequently builds up to a tidy aum over the years the countries of the West (including Jopen) managed to build up a large deposit of dollars at their central bank. The centrol banks were obliged to buy up the dollors earned by exporters at the current rate of exchange and give them the local currency in return.

In this way the central banks of countries outside America were no longer without o supply of dollers. Mony countries paid back the credits they had received from America after the War as soon as they could, and still had enough dollars in reserve to pay for their imports thus freeling traders, tourists and cepital dealers from all restrictions.

The meesures that had to be introduced during and after the Wer, such es retion cards, export and import restrictions. currency exchange controls and the like could all be removed as soon as these countries were back on their feet agein.

During this liberalisation of foreign trade in the rebuilt countries of the Western industrial world in the fifties end sixties something quite decisive was over-

There was suddenly e large supply of vitally importent commodities (housing for instence) with the removal of governthe removal of these controls, the ending of currency exchange restrictions, thus liberalising trade between Western industrial nations, etcetere, it wes forgotten thet the price for the dollar, no longer e rere commodity, and for the other currencies that were once agein flourishing should also be freed.

Within the Individual countries shelves were full of etocks and prices were determined once again by supply end demand, but on the international currency markets the old fixed prices atill remained intact.

The occasional devaluations and re- a clear indication that there will not be valuations in various countries showed two categories of members. how unrealistic these fixed prices often

putting an end to the official system of price fixing on foreign currencies in the Western world.

When the State control of the economy enforced by the War was removed the prices for goods, services and copital (that s to say interest rates) were eble to fluctuate in an upward or downward direction within the various countries in accordance with the level of supply and demand at the time.

As soon as demand became too high this would be levelled out with a price rise, which would tend to scare off a number of potential customers.

But it was a different story on the market for the currencies of the various countries, that is to sey on the international currency exchange markets and this applied right up to recent

Despite e continuing increasa in the supply of dollars end certain other currencies e fixed prica according to the Bretton Woods system had to be peid.

On the other hand scarcer currencies such as the Merk, the Swiss Franc and the Yen could still be bought et the low official Bretton Woods prices, although there was e great demend for them from many countries of the world moking them far more valuable, end occordingly their price should have been relsed by a number of reveluations.

Thus it is no wonder that internationally trading, services and the flow of capital were constantly being put out of joint. Prices on the international currency

INDUSTRY

Bonn and Düsseldorf work on plans to save ailing coal industry

ution of Ruhrkohle Aktiengesellschaft To put it another way, this me had a number of pits would sweep away importers, exporters, manufacture and This unit company of Ruhr pits banks, consumera, tourists and savent are nathing more than improved op-

One way of rostoring order and subt than setisfaction about the way the

company with e small capital backing and this applies to Ruhrkohla - tends to be buffeted far more heavily than a company with plenty of capital beliast when an economic and financial storm

Recent decisions taken by the govern-ments in Bonn and Düsseldorf (capital of North Rhine-Westphalia, the Ruhr state) have, however, created the right circumstances for consolidation of the company to be brought to a successful conclusion. Nevertheless the worst is yet to come.

One of the great advantages of a unit company setup should, however, make itself felt, in that employees need not fear for their jobs. In futura any adjustments that are made will be a result of strict planning procedures.

When questions are raised about burning subjects such as early retirement, redeployment and transfers, the answer is not simply left up to the Fates. In questions such as this the beneficial effects of warker participation in management are felt. Also the social awareness of the governments in Bonn and Disseldorf come into play, since they backed up the programme of edjustment with sociel

tlus; money for investment must be many forecasts of recent years have had found. Ruhrkohle needs about 4,500 to be corrected drastically there is no

In addition to this, voluntary solutions million Marks for investment between to problems have a tendency to be more now and 1980. This amount would raise expensive than legally enforced solutions. the level of investments per utilizable ton All in all it has become clear that a of coal produced to more than five Marks, which was the figure back in

In 1970 only 2 Marks 60 Pfennigs per utilizable ton were invested and in 1969 the figure was even lower at 2 Marks 42

This low level of investment is another reason for the unsatisfactory rise in productivity in the coal industry in recent

If coal is to be a viable source of powar in future it is vital for investments to be increased and organisation within the company to be tightened up. But Ruhrkohle will not be able to find capital for reinvestment from its own sources, nor will it be abla to borrow sufficient

The long term plan of consolidation on which the company as well as the governments in Bonn and Düsseldorf are working will have to find an answer to this problem. The contributions from the old constituent companies will be an important part of this end en increase of capital through new issues of shares should provide the best method, although there would not of course be eny dividends to pay.

A policy for coel is e part of any The problem for the future, however, is general fuel and powar policy. Although

denying that the requirements in fuel and power will continue to increase immensely. It is likely that electricity consumption will double in the next decade.

It would be a false and dangerous policy for power stations to rely entirely on imported sources of energy in the future. Dependence on outside sources of energy could become so great that this country would find its supplies of electricity no longer guerantced.

Steel production in the future will be as dependent on coke as ever. All this talk about the international market providing all the supplies we need more cheaply over a long period is just part of the propaganda of the price war. Today steel has to bargain for coke prices, however, whereas in the past the steel industry could call the tune.

(Vorwärls, U November 1971)

Iron and steel production declines

In the first nine months of this year the amount of crude steel produced in the Federal Republic was 31,500,000 toris, n drop of 9.5 per cent compared with the same period of last year, according to the Düsseldorf branch of the Federel Stat-

Production of pig-iron also showed a drop. At 23,400,000 tons it was 9.3 per cent down on the first nine months of

There was likewisc a drop in the production of rolled steel - this was lown by 11.3 per cent to 22,300,000 tons. In the production of iron, steel and malleable iron castings there was a decrease of 9.3 per cent.

TECHNOLOGY

Berlin's Testing Institute celebrates its 100th year of operations

The Federal Material Testing Institute, BAM for short in German, has just celebrated its centenary. It has been a varied, colourful and at times turbulent and problematic century reflecting the century of German history that it has accompanied between 1871 and 1971.

It has been marked even more strongly, however, by teclinical and technological developments over the past hundred years. BAM as the boffins proudly and laconically call it, does an important job

Its function is to check materials and their composition with the aim of combining safety as the prime consideration with economy as a no less important eriterion and to help utilise to the full naw teclinical and economic possibilities.

BAM feals itself to be an honest broker between the justified demands of manufacturers and the no less justified requirements of consumers, its aim is to foster tha free flow of technological know-how in materials and ensure the

Jülich physicists prove existence of short-lived isomets

A title department of neutron physics of Jülich nuclear research centre a team of physicists has succeeded in proving the existence of a large number of extremely short-lived isomers in the radioactive by-products of uranium

Isomers are isotopes of fissue elements with nuclei containing the same number of protons and neutrons but differing from each other in nuclear energy. As a rula their lifespan is only a few millionths

They are identifiable because they give off their surplus energy in the form of gamma radiation. At times the inner transformation brought about by the gamma rays leads to the ejection of an electron from the utomic structure, the atom responding by emitting a charac-

By means of measurement of energy and radiation amitted the isomer in question can be identified and its lifespan

The fissile products used in Jülich came from the RFJ 2 experimental reactor. With the aid of a fissile product separator the various fissile products are separated from each other within a millionth of a second of their formation. Their radiation can then be examined separately.

In this way the research team was able definitely to identify eight different isomers and to isolate in all probability a further seven, aach diffaring in element

All of them reach half-way house as far as lifespan is concerned between a tenmillionth and a millionth of a second.

In the course of similar measurements taken at tha Hahn-Meitnar institute of nuclear physics in West Berlin a cobalt isomer with a half-life of a hundred thousandth of a sacond even had its magnetic characteristics precisely deter-

The possibility of examining atomic structures that are even shorter-lived will considerably increase our understanding of unstable nuclei, their nuclear structure

lopment. (Frankfurier Allgemeine Zeitung für Deutschland, 10 November 1971)

maintenance of safety, quality and an

This turn of phrase is not taken from the centenary brochure. It was coined by the first director of what in 1912 was called the Royal Material Testing Office at Lichterfelda-West, Barlin. It remains as true and to the point today as it was in

In point of fact tha beginnings of the Berlin materials testers were in Frankfurt on the Oder, where in 1847 August Wöhler of tha Lower Silesian-Brandenburg Railways, later taken over by the state of Prussia, first engaged in engineer-

Wohlar was troubled by the fuct that radway track and axles kept cracking and breaking. From 1856 on he carried out enduranca tests on iron and steel with the aid of a machine specially designed fur

the purpose by himself.
The results of his work were published as the years by in the Construction Journal and when, in 1869, he was appointed director of the Norddeutsche Waggonfabrik in Berlin the Prussian Minister of Trade and Industry ordered the transfer of "Herr Wöhler's apparatus" to the Royal Trade, Academy in Berlin where tests were to be continued.

The scene was thus set for the establishment of a material testing utstitute in Berlin but a good generation was to pass before all material testing facilities were finally centrally housed.

The experimental mechanical engineering institute that developed from Herr Wolder's apparatus was merged in 1879 with the building materials testing centre: and the newly-founded experimental. chemical engineering institute.

The three facilities were ntade repousible to a government commission and reorganised along uniform lines by a decree of the Prissian Ministry of spiritual, Educational and Medicinal Af-

division of the work of today's BAM us it has continued to the present day.

Difficulties enough have been encountered in the course of the past century but none can have been so great as those faced when the institute was forced to sturt again from scratch aftar the Second World War.

The buildings in which the laboratories were housed had for the most part remained unscattled but their contents ware dismantled and the machinery conspicuous by its absence.

On 1 August 1945 the material testing Institute was merged with the Reich institute of chemicals technology, which during the war had been mainly concerned with military research.

Shortly afterwards these two were joined by the former Reich X-ray centre, the research centre of the Acetylene Association and the construction engineering research department of the city

It was not until the fifties that the ides of combining the various facilities to form a single Federal research centre materialised. One of the reasons why the idea arose was that West Berlin Senutc was no longer in a position to meet the funancial requirements of a growing research complex. In 1954 the Federal Mechanical and

Chemical Material Testing Institute was officially opened. The change to the present name occurred in 1956. The new institute was attached to the Federal Ministry of Economic Affairs.

Nowadays BAM is one of the most world, even though other industrial enuntries also set great store by muterials

As a result of considerable expansion in recent years the institute now employs a stuff of 1,000. It consists of six departments; metals and metal construction, building, organie muterials, chemical safety engineering, applied matter and micchanies, special applications and processes independent of specific maleral in other words, the work carried or ranges from checking pots and panse surveying nuclear reactors.

Master plan to trace polluters started

The pilot scheme is being conducted in the Cologne area. The nature and extent of atmospheric pollution is registered on master plans in the form of dots, lines or shading. Factorias, chimneys, roads, waterways and slag heaps are also entered on the mastar plan and the relation between one and the other can be quickly concluded from a glance at the map.

Data for the Cologne area have been

compiled regularly for over two years. In an area of roughly 500 square kilometres A further item of legislation provides every source of atmospheric pollution is painstakingly recorded, whether it be exhaust, chimnay black or a gas leak. In many cases gas samplas have to be provides for the establishment of a

network of observation posts in built-up analysed. Samples are frequently taken at various stages of operation of, say, a factory process, the idea of course being Each and every source of atmospheric pollution is to be pinpointed in a polluto determina the degree of pollution at tion survey. The survey will then form the basis of clean air measures and future

any given staga.

All substances found to be present in the atmosphera are carefully catalogued according to name, source and compo-North Rhine-Westphalian Ministry of

Labour and Haalth from Rhineland TUV. In the case of industrial offenders (an organisation responsible, among many individual readings are taken. In the case other things, for the compulsory two-year roadworthinass tests on motor vehicles)

of domestic heating the master plan is divided into sections of 100 by 100

Chimney sweeps' files are scored determine the installed heating especial and chimney height of each and and

Traffic surveys nrc conducted to mate the extent of pollution altribute to motor vehicles. Aerial photos are used, since they facilitate estimates of traffic density of entire regions. Semeasurement vehicles also tour the to determine driving liabits at the value spots on the map.

All data is fed to the TUV compared by the com pollution over an area inhabited by 70,000 people.

In addition to this the pollution for 100 small firms and tradesmen been recorded and all told the companies has been fed with 400,000 individe items of information.

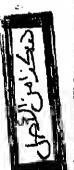

Comprehensive programmes have best drawn up to evaluate these dats. mation printed out is limited as require to answer any conceivable query realist to 45 main categories and a further nineteen combination. ninetcen combinations.

Progress so far would seem to indicate that the system developed for this paint that the system developed further point cular project has revealed further point worthy of consideration by the power that be when new regulations are in the transfer. Konrod Mille

(Der Tagesspiegel, 23 October 1921)

We're proud to call' ourselves "The 747 people." Because Pan Am pilots, stewardesses and ground crews were the first with the 747. We know it better. And we've flown more passengers (over 3-million, so far) to more places than any other airline in the world. Pan Am[®] serves 124 cities in 84 lands. And we fly more 747s to more cities than anyone else. We're always looking for new ways to give you more value for your travel dollars. And we have the experience it takes to do it. Try us. You'll see. World's most experienced airline.

BONN WORLD

New head of protocol takes over for Queen Juliana's State Visit

The red cerpet has been rolled out. The guard of honour made up of soldiers from the Bundeswehr was on parade. A twenty-one gun salute was fired. Guesta and hosts shook hands. Good wluahes were exchanged and netional anthems were played. The guard of honour is inspected by the guests who then teke their places in the large, bleck limousines awaiting them. Flash bulbs pop, police sirens scream — so began the visit to this country of Quean Juliana and Prince Bernhard of The Netherlands.

All State visits all over the world follow the same ceremonial pettem. A mighty force dictates what should take place on these occasions and to this mighty force, called protocol, emperors and kings, heads of state and prime ministers bow.

"Protocol is a kind of management." the new head of protocol in Bonn, Count Max Podewds, expleins.

Tha Count, 52, e former army officer, worked with the Bavarlan Economic Affairs Ministry efter the war. He then worked with the West German embassies in Tunis, Teheran and New Delhi. Organising Queen Juliane'a visit to this country was lus first assignment since taking on the job as head of protocol.

His predecessors were Hans Schwarzmann, Ehrenfried von Holleben, Sigismund von Breun, Günther Mohr and Hans-Heinrich von Herworth.

Max Podewils, e man from Upper Baveria with e rather Prussian appearance, has no time for protocol fanatics. He said: "Questions of atiquetta have nothing to do with my job. I operate behind the curtains and not on stage."

He compares his work to the tasks undertaken by a general staff officer in the army. He quipped: "Everyone knows that a steff officer must remain unonymous. If everything goes well no one there is no knows of his existence, but if anything doing so."

THE GERMAN TRIBUNE

Foreign Minister Walter Schaal and the naw protocol haad, Count Max Podewils (Fhoto: J.H. Darchinger)

untoward occurs everyone turns to him to sort things out."

Count Podewils, whose anciant family comes from Pomerania end whose most famous ancestor was a foreign affairs minister in Frederick the Great's ad-

Bernhard, sat next to the driver of the official Mcrcedes 600 instead of taking his place next to Hilda Heinemann. President Heinemann's wife, and in so

Count Podewils kept calm and coolly said: "If anyone gets excited about it there is nothing I can do to provent them

The count, an cuthusiastic showing per. has developed his own methods of keeping control of the reins of protocol and of deeling with difficult visitors.

"It's the same with horses," he says. "You cannot argue with them. You don't ministration, is unflappoble. take a horse to a practice ring without He did not turn a hair when Prince first getting to know his tricks. It's the best way of making the animal adhere to the rules. Discussions only irritute him."

Protocol, eccording to Brockhaus, is "o collection of rules tu be observed in doing offending the rules of protocol. matters of etiquette, in public cereinonies and in diplomatic relations." These rules concerning rank and precedenco were drawn up for the Congress of Vienno ln

These rules have survived wan revolutions and ere effective all out if world. They were confirmed in 1961; the Vienna Convention on Diplom

Relations.
No matter how old the role of protocol are the new head of protocol Bonn does not consider that it would right for him to reform the rules of right for him to reform the rules defending the form and substance people are complaining about the way official receptions Count Podewils as prices have rocketed in Munich even "Respect for certain forms of repeats than anywhere else — and how right totton is indispensible." Everyone folkest are! With the Olympics looming this, If we make exceptions to the right on the horizon hoteliers, restauraour guests might feel offended. A friends a building contractors and shopatmosphere is essential for political agest are already doubling their prices, cussions." light be added to the credit of local

In the political world respect the that self-help is proving of some pracedence is vitel. It is not just a mentioned in averting the worst in of taking due note of personal susceptibiles. And far-sighted businessmen ities but also of giving to a State by have visions of prices plummeting proper recognition.

Compared with diplomatic usage the Swiss are accustomed to paying lowed in France, Britain and Estate with the nose for hotel rooms but one Europe protocol in West Germany is wister was speechless recently on pompous.

pompous.

Perhaps it is not stuffy enough. Taking that the best offer of accongovernment in Bonn, for example, It was a small and not particularly degalow instead of e palace, as is done to guests a base pension on the outskirts of the city most other countries. There are not make the stablishment for the use of visited from a cropper and not make the Count Podewils commented: The makes our work difficult sometimes.

But on the whole official visits go diagnostic for the use of visited and the stablishment for the use of visited and the stablishment for the use of visited and the stablishment for the use of visited and fortune he must be expecting. He makes our work difficult sometimes.

But on the whole official visits go diagnostic finds a sufficient number jackets are worn, decorations are an expectations.

jackets are worn, decorations are a changed and there is a gala dinor. In man-of-the-people President Heineman, who of first had difficulty accommods ing himself to the rules of protocol, is bed to size in and follow the rules of protocol, is had to give in end follow the rules.

He trics to get out of pompous diams
Olympics environs

that are normally included in his pagramme, and he has succeeded in both his Bundestag and state assemblies ing a few of the more strict ruled have special legal provisions to fore-protocol.

For the first time State guest did it parliumentary buildings. The with the President informally with the President informally with the parliumentary buildings. The same family. Afterwords Prince Bernhadad to the family. Afterwords Prince Bernhadad to the sense of the most genuitileh (cosy) evans.

The word is most genuitileh (cosy) evans, and have been submitted to the last left tho seens, the red cerpet has the rolled up and the head of proports for the next State visit.

DEUTECARS ALLOENCINES SONNTAGSBLATT

Prices in Munich rocket as next

year's Olympics approach

of guests who have no idea whet money is worth he is going to have to lower his sights and cut his prices drastically when the time comes.

Serious businessmen in Munich and environs have been doing just this for some time now. Apart from a few sanguine swindlers traders are thinking less in terms of cashing in on the Olympic fortnight than of investing in long-term

Olympic publicity, merchandised by 4,000 journalists and 2,500 radio and TV teclinicians, is expected to boost the tonnist trade in general. Munich is not to ia going towards the construction of become another Oberammergau, where the fat play years are followed by several lean seasons that make the trade wonder whether it is all worthwhile.

Hoteliers in particular, having invested substantial sums of capital, are hoping to reap appropriate eash rewards in the long

Foreign operators especially have converged on Munich as though it were the Klondike. By next Angust the city will boast an additional 4,000 hotel beds, bringing the total number of visitors that can be accommodated up to 23,000.

These figures are for the city alone and newly-built hotels are abnost all in the de linxe or super de linxe categories. "A good many more then enough," the Bavarian hoteliers end restaurateurs association contrichts.

It is this surplus accommodation that presents the mnat alarming prinspect in the opinion of those who have visions of the Lord Mayor's show being followed by

Accommodation available in Munich and environs will certainly be fully booked during the Olympics - and the tourist board has located 130,000 beds to suit all tastes and pockets in and around

But it is already apparent that every last notel bed within a realistic distance from the city will not be filled. The organisers have been a little overoptimistic. The outer regions of Upper Bavaria and Bavarian Swabie will not derive as much benefit from the Olympics as was originally expected.

Hoteliers and restauroteurs account for the bulk of private investment with the Olympics in mind. Together with public money to be ploughed into the Games the rough all-in total comes to 4,000 million Marks or so, about half of which Olympic sports focilities proper and the organisation of the Games.

The greatest benefit from this spate of investment will be derived by the city of Munich, much to the envy of other local euthorities. The city would never otherwise have been able to modernise its infrastructure and tronsport system to so great on extent.

In this context too, of course, there has been an unparalleled boom. Munich people are moaning about the uncom-monly hectic pace of life and are looking forward to post-Olympic peace and quiet.

A sudden end to local boom conditions

may, however, result in crisis and crashea just like any other recession. This is the risk involved

Rents and the price of building and land on which to build have been the chief victims. It is not merely a matter of comparing estata ogents' edvertisements before and ofterwards, as it were. Munich people can see from the value of the moncy in their pockets that the Olympics

Olympics roof, the world's largest and

most expensive, nears completion

are going to prove an expensive business for them too.

A few years ago Munich was a relatively inexpensive city in comparison with other parta of tha country. Prices were low and wages too lagged behind the run of the mill in other principal cities.

But ever since the day, some five years igo, when the Internetional Olympic Committee decided in Rome that the 1972 Olympics were to be held in Munich thia state of affairs has changed with a

Munich may still be a little behindhand as far as wages and salaries are concerned but creeping inflation has been getting on like a house on fire.

Local residents are now worried, with every good reason, that by next year Munich will not only have caught up with the rest of the country but taken the lead - as in lunsbruck, where the Winter Olympics of 1964 left prices on a par with the most expensive cities in the world.

Trade bodies have of course, assured all and sundry that their membors have not the slightest intention of increasing prices all along the line. They even propose to set up complaints centres where individuals who feel they have been sold down the river can lodge

Munich people are for from reessured by undertakings to sat up temporary consumer protection bureaus of this kind. Their problem is less the exorbitant price increase of a few outsiders than general and diaproportionate price increases as a result of the unparalleled influx and epresenting a natural response on the part of the market mechanism.

A consumer bureau is unlikely to be able to cope with this trend, not even if it were to stert work e year before the Olympica (and ea it is the idea is to open up e mere week beforehand).

What would it have done about the recent decision by traders et the main railwey station to charge twice the normal price for a box of metchea? Matches ere manufactured by o monopoly; what ore consumers to do when o group of traders too enjoy and utilise u monopoly position? Jan Coster
